Lab- Linux VM as a Terraform Module

```
vijayagagla@DESKTOP-FP4OP26:~/Azure/tf-module-lab$ terraform apply --auto-approve

Terraform used the selected providers to generate the following execution plan. Resource actions are indicated with the
following symbols:
  + create

Terraform will perform the following actions:

  # azurerm_network_interface.nic will be created
  + resource "azurerm_network_interface" "nic" {
      + accelerated_networking_enabled = (known after apply)
      + applied_dns_servers            = (known after apply)
      + dns_servers                    = (known after apply)
      + enable_accelerated_networking  = (known after apply)
      + enable_ip_forwarding           = (known after apply)
      + id                             = (known after apply)
      + internal_domain_name_suffix    = (known after apply)
      + ip_forwarding_enabled          = (known after apply)
      + location                       = "eastus"
      + mac_address                    = (known after apply)
      + name                           = "nic-mod-lab"
      + private_ip_address             = (known after apply)
      + private_ip_addresses           = (known after apply)
      + resource_group_name            = "rg-mod-lab-vm"
      + virtual_machine_id             = (known after apply)

      + ip_configuration {
```

```
