

LAB - Build a YAML File

The screenshot shows a Visual Studio Code editor window with a dark theme. The Explorer sidebar on the left shows a file named 'employee_records.yaml'. The main editor area displays the content of this file, which is a YAML document. The document is numbered from 1 to 32. It defines a list of employees. The first employee is John, with employee_id AC1232, two phone numbers (3645735435 and 435345345), and an address with home, office, and locality details. The second employee is Whitney, with employee_id AVX4353, two phone numbers (3254632 and 3287452), and an address with home, office, and locality details. A notification in the bottom right corner states 'Updates are disabled by installation of Visual Studio Code'.

```
1 ---
2 employees:
3   - name: John
4     employee_id: AC1232
5     phone_numbers:
6       - 3645735435
