

# LAB - Create Your First Ansible PlayBook

The screenshot shows an IDE window titled "sample-ansible-playbooks [Administrator]". The Explorer panel on the left shows a project named "SAMPLE-ANSIBLE-PLAYBOOKS" with files "ansible.cfg", "hosts", and "ping.yml". The "ping.yml" file is open in the editor, showing the following content:

```
1 - name: Ping all Servers
2   hosts: all
3   tasks:
4     - name: Ping all servers to check connectivity
5       ansible.builtin.ping:
6
```

The Terminal panel at the bottom shows the command `ansible-playbook ping.yml` being executed. The output is as follows:

```
vijayagla@DESKTOP-FP4OP26:~/sample-ansible-playbooks$ ansible-playbook ping.yml

PLAY [Ping all Servers] *****

TASK [Gathering Facts] *****
[WARNING]: Platform linux on host diogo-b is using the discovered Python interpreter at /usr/bin/python3.9, but future
installation of another Python interpreter could change the meaning of that path. See https://docs.ansible.com/ansible-
core/2.16/reference_appendices/interpreter_discovery.html for more information.
ok: [diogo-b]
[WARNING]: Platform linux on host diogo-a is using the discovered Python interpreter at /usr/bin/python3.9, but future
installation of another Python interpreter could change the meaning of that path. See https://docs.ansible.com/ansible-
core/2.16/reference_appendices/interpreter_discovery.html for more information.
ok: [diogo-a]
